REVOLUTIONARY AIR **UMBRELLA**

PUB. NO.: 08-308621 [JP 8308621 A]
PUBLISHED: November 26, 1996 (19961126)
INVENTOR(s): TAMURA KIICHI
APPLICANT(s): TAMURA SENNOSUKE [000000] (An Individual), JP (Japan)
APPL. NO.: 07-155101 [JP 95155101]
FILED: May 18, 1995 (19950518)
INTL CLASS: [6] A45B-019/02
JAPIO CLASS: 30.3 (MISCELLANEOUS GOODS -- Clothing & Personal Belongings)

ABSTRACT

PURPOSE: To provide an air **umbrella** having a double airtight construction of upper and lower sheets from which the **umbrella** is quickly shaped by an inflating operation by sending air from a stopper and which is instantaneously shrunk and **folded** by discharging the air by opening the stopper, so that the **umbrella** is a very light, small, and portable without becoming a nuisance and trouble when the rain stops.

CONSTITUTION: The main body portion D of an **umbrella** is made of a material such as a vinyl sheet or a similar material which is air-tight, soft, and tough, and has a double structure of upper and lower sheets A and B. By injecting air from a stopper 5 to a portion between the sheets A and B, the air **umbrella** is instantaneously quickly formed. By opening an air discharging plug F and using the **palms** of hands, the air is instantaneously quickly discharged and the **umbrella** results in a super light shrunk shape.

Abstract (Basic): US 5884859 A

NOVELTY - The control system is formed by a pair of spring plates and gear teeth on crank shaft.

DETAILED DESCRIPTION - The winder (10) has a two-part hollow housing (13) and a gear teeth (18) on a crank shaft (16). The shaft rotates a winding reel (19) attached to a metal rod (11), one of the

housing and the crank shaft. A cable is wound/unwound on the reel. By rotating the shaft, the cable is wound/unwound to make a runner collapse/extend. An opening (22) on one of the housing accommodates the gear teeth. A pair of spring plates (21) are fitted below the gear teeth. One end of the spring plate is anchored on the housing while the other end is seated in the valley of the gear teeth.

USE - For large sized **umbrella** used in garden, **beach** .

ADVANTAGE - Prevents injury during positioning of runner. During winding, a click sound is generated and winding feeling is felt on the **palm** .

DESCRIPTION OF DRAWING(S) - The figure shows the components of coil winder.

Abstract (Basic): DE 3811233 A

The **umbrella** or sunshade has a frame (1) which is inflated by blowing with the mouth, and is worn on the head. It is made of plastics rubber or coated fabric, and is easy to **fold** when not containing air. A strap fastens it under the wearer's chin by means of a clasp of hooked-pile fastener.

A radius of 30 to 40 centimetres is sufficient. There is no hard framework made of metal, plastics or **bamboo** and no handle.

USE/ADVANTAGE - The **umbrella** or sunshade fits over the head, leaving the wearer's hands free.

14.2 (ORGANIC CHEMISTRY -- High Polymer Molecular Compounds)

ABSTRACT

PROBLEM TO BE SOLVED: To protect clothing and goods from rainwater in a crowd of people by an easily handling method wherein, when an **umbrella** is **folded** up after one side of water repellent processing-applied cloth or a **plastic sheet** is fastened in a linear shape over a skirt part from the almost tip of a rainproof part of the **umbrella**, the **umbrella** is rolled up and fastened by using fasteners.

SOLUTION: One side of water repellent processing-applied cloth and a **plastic sheet** 5 are fastened over a skirt part 4 from a tip part 3 of cloth and a **plastic sheet** 2 fastened to a support bone of a rainproof part of a **folded**-up **umbrella** 1, and when the **umbrella** 1 is closed, its wet great part is rolled up, and is prevented from being exposed outside. That is, in the water repellent processing- applied cloth and the **plastic sheet** 5, fasteners 7 are respectively installed on the obverse and reverse sides as female and male parts, and when the **folded**-up **umbrella** 1 is rolled up from above, these are fastened so as not to be loosened. Therefore, clothing and goods can be protected from rainwater in a crowd of people by an easily handling method.

ABSTRACT

PURPOSE: To provide a **folding umbrella** made of a **plastic sheet**, which is **folded** small and carried at the time of non-use, and is formed in an **umbrella** shape by injecting and filling air at the time of use.

CONSTITUTION: By a thin and durable **plastic sheet** such as vinyl, an **umbrella** part 1 having the same shape as a conventional **umbrella** of a circle, a polygon, etc., is provided, and a tubular hollow rib part 2

corresponding to the rib of a conventional **umbrella** is formed radially extending from the peripheral part of the **umbrella** part 1 to the center. Also, a tubular hollow handle part 3 corresponding to the handle of a conventional **umbrella** is protruded and formed extending from the center to the lower part, the hollow rib part 2 and the hollow handle part 3 are formed in a ventilation state each other, and in a part of the hollow rib part 2 or the hollow handle part 3, an injection port 4 for injecting air into the hollow part is formed.

ABSTRACT

PURPOSE: To obtain an inexpensive **umbrella** by providing radially **folding** lines on a waterproof plate body, forming a grip part by **folding** this **folding** , line and curving the waterproof plate body.

CONSTITUTION: A plate body 1 is formed by sheet-like waterproof paper or **sheet** -like waterproof **plastic** . When a **folding** line 2 is **folded** so as to become an edge line of the lower side, and 4a and 5a are **folded** so as to become edge lines of the upper side, and also, 4b and 5b are **folded** so as to become edge lines of the lower side, the oblong plate body 1 is curved and an **umbrella** is formed. The **folded** part forms a grip part 7 having a hole 6 on which holes 6a to 6f are superposed. By holding the grip part 7 with a hand, a state of the **umbrella** is maintained. It is also possible to maintain the state of the **umbrella** by detaining the grip part 7 with a staple, etc. Also, it is possible that the **folding** line is formed as a **fold** or formed as a sewing machine score. Moreover, the waterproof body 1 can be manufactured by working continuously a hoop-like one.

CA 2272762	A1	E	26	B01J-049/00	
US 6059967	A			B01D-035/00	

Abstract (Basic): CA 2272762 A1

NOVELTY - The back-flush apparatus comprises two vertical, concentric tubes (6,7) within the casing with a cap type valve operated by a pressure piston (22) at the top, a second valve (45) at the bottom of the tube to shut off the collector arms (46). In flush operation the inner tube is pressurized; the top valve opened and the bottom valve shut. Water is delivered to the space between the two concentric tubes and draws particulate matter into the space by venturi action and then ejects it top the top valve and back into the tank.

DETAILED DESCRIPTION - The top valve comprises a cap (11) that sits on top of the outer tube (6) and can slide up and down on the inner tube (7). A spring (16) keeps the cap in the normally closed position. Water may be delivered to the piston via hole (33) to move the piston and the cap upwards to an open position. While in the closed position a valve (45) at the bottom of the concentric tubes is open and allows water to flow into the inner tube (7). However if the flow in the inner tube is reversed and the tube pressurized the top valve opens, the bottom valve shuts and a venturi opening at the bottom of the tube delivers pressurized water from the inner tube to the gap between the inner and outer tubes, in the process, drawing particulate material up through the gap between the two tubes and out via the top valve. A deflector (35) distributes the washed particulate material back around the edges of the tank.

USE - The apparatus is used to collect treated water from a process tank containing particulate processing material and for periodic back-flushing of the particulate process material within the tank. Processes may include water softening to remove calcium and magnesium salts or for removing iron and sulfur from water.

ADVANTAGE - In the back-flush mode the flushed particulate material delivered from the top of the tube is evenly distributed back around the periphery of the tank. The back-flush process ensures that any chemical treatment used during back-flush treats all the particulate material rather than just the material adjacent the collector tubes as in prior art processes where the collector tubes are used to deliver the back-flush water to the base of the tank.

DESCRIPTION OF DRAWING(S) - The drawing shows a cut-away view of the tube system illustrating the valves.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 10024492	A	7	B29C-065/74	

Abstract (Basic): JP 10024492 A

A biodegradable moulded product is produced by fusing and welding a
plastic sheet, containing lactic acid as its main component, using
a high-frequency wave welder.

Preferably the elastic modulus in tension of the **plastic sheet**
is pref 30,000 kgf/cm² or less. The **plastic sheet** is made of a
copolymer comprising lactic acid and other hydroxy carboxylic acid,
aliphatic polyhydric alcohol or an aliphatic polybasic acid. The
content of the lactic acid in the copolymer is 50 - 99 wt%.

USE - The biodegradable moulded product is useful for a pocket book
cover, file, raincoat, transparent **umbrella**, **beach** ball and other
products.

ADVANTAGE - The biodegradable moulded product has high flexibility,
transparency and does not degrade with time and causes no blocking. The
used product can be discarded for producing compost or can be combusted
to provide heat without by-producing any toxic gas.

Priority Applications (No Type Date): US 81235955 A 19810219

Patent Details:

Abstract (Basic): US 4370994 A

Umbrella comprises a circular **plastic cover sheet** (12) with a **plastic panel** (16) sealed peripherally to it on one side to form an enclosed space, and flexible plastic tube (20) with one end sealed to the panel and communicating with the space. There is a valve (24) for blowing air through and releasing it from the tube and space, and a bag (32) at the other tube end to hold the sheet, panel and tube when the **umbrella** is collapsed.

Inflating the **umbrella** rigidifies the tube and supports sheet and panel in expanded state. There may be a one-way inlet valve and a second manually closable exhaust valve, the valves being mounted on a bulbous part (22) of the tube sized for easy manual use. There may be a drawstring around the sheet periphery so that it can be drawn into a hemispherical shape and its circumference can be varied.

Priority Applications (No Type Date): GB 7923444 A 19790705

Abstract (Basic): GB 2051537 A

A cloche has a mass-produced **umbrella** structure with a shaft mounting a **framework** and canopy with depth greater than half overall width when fully opened and of transparent or translucent plastics **sheet** . The shaft apex projects through the canopy and has a knob or handle, the other shaft end having a spike for pressing into the soil until the **framework** ends engage the soil.

The cloche may be formed from a complete **umbrella** by removing the handle from the shaft and using the remaining shaft end as the spike. The **framework** pref. has stretchers which when fully open are within an upper part of the canopy so that at least 3/4 of overall canopy height is left unobstructed.

ABSTRACT

PURPOSE: To move outdoors an apparatus which needs moisture prevention, waterproofness, and dust protection. by enclosing the apparatus with a cylindrical **cover sheet** dangling below an **umbrella** part for hindering rainfall, and hanging the apparatus at a hanging part and transporting.

CONSTITUTION: A hang cover device is furnished with an **umbrella** part 16 for hindering rainfall and a detention part 21 for detantion with a crane hook 10 at the top of a longitudinally stretching trunk 15, and at its bottom a metal piece for hanging 11 is installed which has a hanging part 22 for hanging an object(s). A **frame** 13 in horizontal ring form is coaxially hung down at the metal piece 11 through wires 12, 12. A cylindrical **cover sheet** 14 at the opening in the undersurface is by the inside supported on the **frame** 13 by fastening the top of an auger-form roof to the under-part of the **umbrella** 16, and is dangled below the **umbrella**. This hang cover device is lifted by a crane, etc., and placed over the apparatus which needs moisture prevention, waterproofness, dust protection, etc., and the apparatus is covered with the **cover sheet** 14. The apparatus is hung down at the hanging part 22 and transported to the desired place.

Abstract (Basic): FR 2672076 A

The parasol or **umbrella** includes a **framework** (10-14) for securing the **sheet** (4) of the parasol immobile relative to its supporting pole (2) and its stretching ribs (3). The **framework** includes a number of sleeves (10,11) attached to the inner face of the **sheet**, through which the ribs pass.

At least some (10) of the sleeves are blocked at one end to form end-stops for the free ends of the ribs. The inner face of the **sheet** includes a number of rigid plates (14) positioned adjacent to the sleeves, which they engage by means of a clip-type fastening.

ADVANTAGE - Allows rapid, simple interchange of parasol **cover sheet** without replacement of whole assembly.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
FR 2554490	A	19		

Abstract (Basic): FR 2554490' A

The **umbrella** -parasol has a mast (10) with a **cover sheet** (20) which can be **folded** or extended. It has an upper sleeve (34) carrying the spokes (33) of which the ends support the **cover sheet**. A lower sleeve (50) slides on the mast and carries support spokes (53) articulated at their upper ends on the first spokes.

The upper sleeve can slide on the mast, the latter having a stop disc (12) engaging the sheet. Stops control the relative spacing of the upper and lower sleeves so that a minimum spacing is maintained between the first spokes and the **cover sheet**, in the deployed position.

**Cover for opening in ship's hull - has umbrella like frame with
apertured tubular stem for sealing compound**

Patent Assignee: OLIVIER J (OLIV-I)

Number of Countries: 001 Number of Patents: 001

Patent Family:

Patent No	Kind	Date	Applicat No	Kind	Date	Week
FR 2259009	A	19750926				197546 B

Priority Applications (No Type Date): FR 743347 A 19740125

Abstract (Basic): FR 2259009 A

The cover has a hollow stem (1). It has ribs and the **cover sheet** is made of flexible materials. The cover is pushed through the hole in the ship's hull and opened. It can then be pulled down to cover the hole. A plate with a central hole in it is applied to the inner side of the hull, and the plate and **umbrella** are tightened together by means of the nut (19). Sealing material may be pumped through the hollow stem to fill the space under the cover. The system may be used in any circumstances where it is necessary to restrict the flow of liquid.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 5711332	A	12	A45B-025/16	CIP of application US 96592527	

Abstract (Basic): US 5711332 A

The **umbrella** includes a central post having an upper end, and a number of ribs surrounding the post. The ribs have upper ends, and rib pivot connections located a distance from the upper ends of the ribs. The connections join the ribs to the upper end of the post.

There is a member movable along the post, and a number of links, each link having a first link connection and a second link connection. The first-link connections join the links to the upper ends of the ribs, the second link connections join the links to the member. There is also a canopy on the ribs.

ADVANTAGE - The **umbrella** allows the user to open the **umbrella** by lifting one of the ribs rather than by sliding a collar. A mechanical advantage is achieved by applying the opening rotational force at a larger distance from the pivotal axis of the ribs. This is particularly helpful in opening heavy patio **umbrellas**. Additionally the user's hands and fingers are less likely to be pinched as they operate the **umbrella**.

Abstract (Basic): US 5020557 A

The canopy assembly consists of a number of ribs and struts surrounding the post and a fabric canopy attached to the ribs. The ribs are pivotally connected to a rotating hub at their inner ends and supported by a plurality of struts near their midpoints. The struts are pivotally connected at their inner ends to a second rotating hub that is located below the first hub and free to slide along the length of the post.

Sliding this bottom hub up along the length of the post opens the **umbrella**. A rigidly fixed end cap and stop restrain the top hub from sliding along the post while permitting the hub to rotate freely about its axis. A movable stop is used to secure the bottom rotating hub from sliding and may be pinned to the post at a variety of locations. Thin disks of bearing material are attached to the rotating hubs, stops, and end cap to ensure low-friction contact surfaces on which both hubs are free to rotate. (8pp Dwg.No.4/4)

Abstract (Basic): US 4928718 A

The **umbrella** has a central post surrounding an interior spring which is stressed when the **umbrella** is closed. The spring is fixed to the lower end of the hollow post. The upper end of the spring is attached to a pair of strands, both of which extend up through the interior of the post, pass around pulleys mounted on the top of the post and then extend down the outside of the post to a sliding hub. The

sliding hub travels along a section of the post.

The **umbrella** canopy is supported by a number of tibs pivotally mounted to the top of the post above the pulleys. Struts support the frame ribs and pivotally interconnect the ribs and the sliding hub.

ABSTRACT: The Royal Sandals resort, in Montego Bay, offers its guests six nearby **beaches** and a private island on a 17-acre area. The suites themselves are spacious, and...

... size bed (all 190 rooms have them, no matter what their category), complete with two **beach** towels **folded** in the shape of fans on the bedspread, for some reason brought to mind the...

...and aloe, all packaged in a plastic, zippered pouch just perfect to take to the **beach** .

Or I should say **beaches** .

This 17-acre property has six of them, complete with lounge chairs and **thatched umbrellas** for shade.

On certain days, local vendors and artisans set up shop right on the

...

...mishmash of merchandise ranging from straw bags and sandals to paintings and T-shirts.

My **beach** browsing took me from an artist with a water-color in progress to a woman...

...familiar with Sandals Resorts may not remember the company having a Royal Sandals in its **fold** of Jamaican properties.

That's because it didn't until mid-December, when the Sandals...room is now deluxe; superior has changed to premium; gran' luxe to grande luxe; deluxe **beachfront** to grande luxe **beachfront** , and deluxe honeymoon **beachfront** now is known as grande luxe honeymoon **beachfront** .

The **beachfront** royal suite category has not changed.

Rates through March 31 range from \$700 per person...

...nights in a deluxe room to \$1,995 per person for seven nights in a **beachfront** royal suite.

For more information or to book, call (800) SANDALS.

Language: English

Abstract: Kasamawashi is one of the traditional Japanese performance arts. A kasamawashi performer keeps the position of a rolling object on a rotating Japanese umbrella made of bamboo and sheared hemp cloth. A ball made of thread a metal-ring or a square measuring box are used as the object. A kasamawashi performer requires considerable skill, because the object on the rotating umbrella is very unstable. The performer controls the position of the object by subtly changing the revolution speed and slant angle of the umbrella. The basic performance method in kasamawashi is called 'mari no mawashiwake'. We have developed a robot to perform mari no mawashiwake. We describe how the ball position on the umbrella, which is intrinsically unstable, can be controlled by using the PID control scheme. The robot controls the position of the ball, but the ball oscillates around the desired position with an amplitude of about 6 cm. This oscillation is caused by the distortion of the umbrella.

Abstract: This study examined the tent-making behaviour and social organization of the lesser dog-faced fruit bat, *Cynopterus brachyotis* (Muller), in Peninsular Malaysia. *Cynopterus brachyotis* alters the leaves of eight species of broad-leaved palms (Palmae) to form palmate umbrella tents, the leaves of *Scindapsus aureus* Engl. (Araceae) to form apical tents, and the leaves of *Dracaena fragrans* Ker-Gawl (Liliaceae) to form conical tents. *Cynopterus brachyotis* also severed the roots of *Cymbidium finlaysonianum* Lindl (Orchidaceae), and the leaves and stems of *Philodendron lacerum* Schott (Araceae) to form stem tents. In addition, *C. brachyotis* also roosted in unmodified plants. *Cynopterus brachyotis* possesses a harem type of social

organization, but it was not possible to distinguish between a resource-defence polygyny and female-defence polygyny mating system. Our observations indicate that dominant males construct tents, and recruit females for the purpose of gaining reproductive access.

Title: TENTS AND HAREMS - APPARENT DEFENSE OF FOLIAGE ROOSTS BY TENT-MAKING BATS (Abstract Available)
Author(s): KUNZ TH; MCCracken GF
Corporate Source: BOSTON UNIV,DEPT BIOL,5 CUMMINGTON ST/BOSTON//MA/02215
Journal: JOURNAL OF TROPICAL ECOLOGY, 1996, V12, JAN (JAN), P121-137
ISSN: 0266-4674
Language: ENGLISH Document Type: ARTICLE
Abstract: Palmate **umbrella** tents used by tent-making bats in Trinidad, West Indies, were observed in three species of Neotropical **palms**, *Sabal mauritiiiformis*, *Coccothrinax barbadensis* and *Mauritia flexuosa*. Tents were most common in **palm** leaves that have supporting petioles angled at 50-70 degrees above the horizontal. The shape and volume of tents is influenced mostly by leaf morphology (leaf width and leaflet length) and age of the tent. Tent-crowns varied from being heart-shaped in *S. mauritiiiformis*, oval or round in *C. barbadensis* and spade-shaped in *M. flexuosa*. Leaves in which tents were constructed were most often beneath overhanging vegetation, and were generally free of vegetation below, allowing bats to enter and depart from tents without being impeded by the clutter of adjacent vegetation.
Singles and small apparent harem groups of two bat species, *Artibeus jamaicensis* and *Uroderma bilobatum*, were captured and observed in tents made from the leaves of *S. mauritiiiformis* and *C. barbadensis*. No bats were observed in tents constructed in leaves of *M. flexuosa*. The apparent harem social organization in these and other tent-making bat species suggests that leaves modified into tents may provide critical and defendable resources that promote the evolution of polygyny. This hypothesis is based on the observed patchy distribution of suitable **palm** trees, the inappropriateness of many **palm** leaves as potential tents and the resultant architecture provided by palmate **umbrella** tents. We suggest that tent-making is an adult male behaviour.

The study of aging has escaped the attentions of most social historians. Stimulated by the social-consciousness movements of the 1960s and the attention accorded the aged by social scientists, a small group of social historians began examining aging. Most of these studies focused on the material position older people held in society. Few examined the

history of retirement. Historians, countering the claims of social scientists who touted the influence of modernization theory as a major dynamic explaining the elderly's position in society, argued that human agency played a greater role than previously assumed.

Following U.S. victory in World War Two, America's elderly enjoyed growing financial benefits from subsequent amendments to the Social Security Act of 1935. Improved social security legislation, along with the institutionalization of retirement pensions, enabled older people to retire early. Healthy, mobile, and increasingly affluent, retirees left the urban centers of the Northeast and Midwest for retirement destinations in the Sunbelt. Florida, by 1995, had drawn large numbers of these retirees into its southern counties of **Palm** Beach and Broward.

In the late 1960s, real estate developer, H. Irwin Levy, started the marketing of a retirement lifestyle, aiming to alter stereotypical views of retirement. Levy's Century Village "lifestyle" proved enormously successful with the approximately 75,000 predominantly-Jewish retirees who moved into Levy's four Century Villages in West **Palm** Beach, Deerfield Beach, Boca Raton, and Pembroke Pines, Florida, from the Greater New York area. With Florida's aged population approaching one-fourth the state's population by the mid-nineties, the state, reflecting future national demographic trends, serves as an important area for the study of retirement. Throughout two decades, residents of the four Century Villages effected important changes in Florida. Century Villagers pursued an active and highly social-oriented lifestyle that reflected the significance of generational and cultural identities established long before migration to the Villages. Organizing themselves into condominium owners **umbrella** associations, Century Villagers managed to exercise significant control over the daily maintenance and operation of the their respective communities. Residents of the Villages altered the course of subsequent condominium law in Florida, and transformed the frontiers of aging.

Production of Article Having Aluminum (Alloy) Substrate.

CORPORATE SOURCE: Nemoto Seisakusho

PATENT NO: JP85262639A-KoKai

PATENT COUNTRY: Japan

APPLICATION DATE: 9 June 1984

JOURNAL ANNOUNCEMENT: 8606

ABSTRACT: Method comprises oxidizing the surface of Al or Al alloy sheet to form an oxide layer with thickness of 5 μ m or less, forming an interlayer of flexible plastics on the oxide layer, forming a surface layer made of hard plastics on the interlayer, and shaping the laminated sheet by press drawing. Preferably the surface of Al (alloy) sheet is oxidized with solution of, e.g. bichromic acid, bichromate. The flexible plastics is, e.g. PVC, an EVA, whose surface may be printed for decoration. The hard plastics is, e.g. polyurethane, an acrylic resin. Aluminum (alloy) sheet, surface-treated and coated in the form of sheet, can be punched out or drawn into, e.g. cap of a vessel, handle of an umbrella, dial, push button, with low cost and without generation of cracks.--DCPI.

ABSTRACT: Using hub and rim for a bicycle, a pair of flexible fiber reinforced membrane is pitched like an **umbrella** between these hub and rim along with spokes. This wheel is light, and the air resistance is little in high-speed rotation, and a cushioning function is good. For this reason, the energy saving effect is high, and this wheel is noticed as a wheel for a racing bicycle and for a solar car. The membrane structure : twist strings of aramid fibre which impregnated with the **plastic** resin are sandwiched between 2 **sheets** of the resin film.

Title: New technique for underground homes

Author(s): Langa, F.S.

Source: Rodale's New Shelter (United States) v 4:7. Coden: RNSHD

Publication Date: Sep 1983 p 98-100

Language: English

Abstract: The world's first underground geodesic dome was built in Missoula, Montana. This innovation, which uses an insulation **umbrella**

constructed of interleaved **plastic sheeting** and polystyrene insulation, holds heat, sheds water, and costs about 35% less than installed cost of a high-tech elastomeric system applied over an equivalent amount of foam insulation. By day and during summer, the earth bubble surrounding the dome is charged with free ambient warmth. By night and during winter, the stored heat returns to warm the house.

Publisher: SPRINGER VERLAG, 175 FIFTH AVE, NEW YORK, NY 10010

Language: English Document Type: ARTICLE

Abstract: As people become better informed about the harmful effects of prolonged exposure to solar ultraviolet radiation (UVR, 280-400 nm) they will seek the protection of shade, particularly in tropical locations such as Townsville (19 degrees south). Using broad-band radiation sensors for solar ultraviolet-B (280-315 nm), ultraviolet-A (315-400 nm) and daylight (400-800 nm) radiation, the exposure levels were measured in both the horizontal (shaded and unshaded) and vertical (shaded and unshaded) directions. The measurements were conducted at eight locations (shade settings) in Townsville during the period between December 1997 (summer) and May 1998 (beginning of winter). The quality of protection was assessed by the ratio of unshaded to shaded radiation exposure, the UVB/shade protection ratio (WB-SPR). The WB-SPR varies considerably between the different shade settings, with a **beach umbrella** showing the least protection and dense foliage the highest protection. The roof of a house verandah can provide only little protection if the verandah catches the afternoon sun. Increasing cloud cover decreases the UVB-SPR for all settings because of the increase in the diffuse fraction of the radiation. Only one setting provided a UVB-SPR of 15 or higher, as suggested for protective shading against solar UVB radiation. Shade from direct sunlight alone does not provide enough protection against: high levels of solar UVR. Apart from the transmission qualities of the shading material, it is the construction of the whole shade setting that determines the exposure levels underneath. A shade structure with enough overhang is recommended so that high levels of scattered radiation do not reach the skin.

ABSTRACT: A flexible composite material for shielding against sunlight, developed by Mitsubishi Heavy Industries and Fujimori Kogyo of Japan, is briefly described. The material consists of four layers bonded together, i.e. a white ceramic-filled PU for light reflection, an aluminium foil, a low-density polyester for insulation, and nylon fabric for reinforcement. Potential applications include automobile covers, **beach umbrellas**, tents and other outdoor structures. This

abstract includes all the information contained in the original article.

ABSTRACT: A new rubber-like material that shields sunlight and is heat insulating has been developed jointly by Mitsubishi Heavy Industries and Fijimori Kogyo Co. The thin, white, virtually opaque sheet consists of four layers bonded together with an unspecified adhesive. Possible applications include car covers, beach umbrellas, and tarpaulins for tents and other outdoor structures.

Publisher: ACADEMIC PRESS INC JNL-COMP SUBSCRIPTIONS, 525 B ST, STE 1900, SAN DIEGO, CA 92101-4495
Language: English Document Type: ARTICLE

Abstract: Nitrogen and water adsorption properties on the porous silica glass surfaces modified by different concentration of trimethylsilyl (TMS) groups were studied. The specific surface areas and parameter C values in the BET equation estimated from nitrogen adsorption decreased with increase in the surface concentration of the TMS groups and became constant values above 1.0 TMS group per nm². The water adsorption property suggested that a highly silylated sample still represented hydrophilic character in initial adsorption process. Water molecules interact with the residual hydroxyl groups existing under the **umbrellas** of the TMS groups and form clusters. Above the concentration of 1.0 TMS group per nm² the capillary condensation of water vapor did not occur. The TMS groups interrupt to build a two-dimensional network of each cluster. The formation of multilayer adsorption of water molecules depends on the magnitude of hydrophilic patch areas which are surrounded by TMS groups. (C) 1997 Academic Press.

Language: English

Abstract: Transient temporal and spatial spray characteristics have been investigated. A kind of practical fuel injector with swirl nozzle was examined under variable injection duration within the range of 0.25 to 4.0 ms and injection pressure 5.0 and 7.0 MPa. The fuel spray was injected at a cycling frequency of 50 Hz in a room under normal atmospheric condition. Considered details of sub-millisecond transient dynamics were observed by using a high-speed video camera with temporal resolution of 24.69 μ s (40 500 frames/s). The results indicate that investigated spray consists of two incorporated flow fractions that are a core jet and a quasi-umbrella droplets spray simultaneously moving down and swirling in local cross-axis domains. Instantaneous transient values of axial and radial penetration were accurately evaluated and analyzed. It was observed that after actual injection a post-injection of fuel droplets occurs and the time-delay and lifetime of these droplets were systematically estimated. (Author abstract) 11 Refs.

Abstract Length: LONG (36 lines)

From the introduction (of the translation journal): ``The stability of singular points on surfaces obtained by smooth mappings from \mathbb{R}^2 to \mathbb{R}^d can be analyzed in the framework of the theory of singularities of smooth mappings [V. I. Arnold, A. N. Varchenko and S. M. Gusein-Zade, Singularities of differentiable mappings (Russian), ``Nauka'', Moscow, 1982; MR 84m:58016; M. Golubitskii and V. Giilemin, Stable mappings and their singularities (Russian), Translated from the English by A. G. Kusunirenko, Izdat. ``Mir'', Moscow, 1977; MR 57#7652]. For $d=3$, stable

singularities are isolated pinch points (in their vicinity, a surface has the Whitney **umbrella** shape). For $d > 3$, a surface of a general form is embedded in \mathbb{R}^d .

The behavior of singularities of string world **sheets**, the extremal area surfaces, is different in d -dimensional Minkowski space. This question was first considered in [G. P. Pronko, A. V. Razumov and L. D. Solovev, Soviet J. Particles and Nuclei 14 (1983), no. 3, 229--237; MR 86e:81096] for the case of closed string world **sheets** embedded in three-dimensional Minkowski space. It was shown that all such surfaces are singular surfaces; for a surface of general shape, the singularities on the world **sheet** are lines on which the constant time slices of the world **sheet** have cusps. It was noted in that paper that such singularities are connected with singular solutions of the two-dimensional Liouville equation investigated in [G. P. Dzordzadze, A. K. Pogrebkov and M. K. Polivanov, Teoret. Mat. Fiz. 40 (1979), no. 2, 221--234; MR 80j:81058; A. K. Pogrebkov, Teoret. Mat. Fiz. 45 (1980), no. 2, 161--170; MR 82k:58048].

We give a detailed classification of singularities on open-string world **sheets**. In Section 1, we demonstrate that the stable singularities of world **sheets** are lines for $d=3$ and points for $d=4$. A world **sheet** in general has no singularities for $d > 4$. The global structure of singularities on the open-string world **sheet** is described in Sections 2 and 3. These singularities are interesting from the physical viewpoint.'

Thatch COLLECTION

Why is American Holtzkraft Inc. world renown? Are we the biggest? Are we the best? Granted, it is a fairly small industry, but we believe the number one reason is because we do things no one in the world has done before. We have done the research and for two long years worked at making a quality, beautiful, useful, thatch umbrella that easily and quickly closes as well as it opens.

Our team of company and local central Florida experts walked out of our think tank with an additional bag of features we are fortunate to enjoy - even though unexpected. The first generation of the thatched umbrellas is constructed with a custom weaved palm thatch canopy.

American Holtzkraft Thatch Umbrellas blend beautifully with natural surroundings or landscaped planting areas.

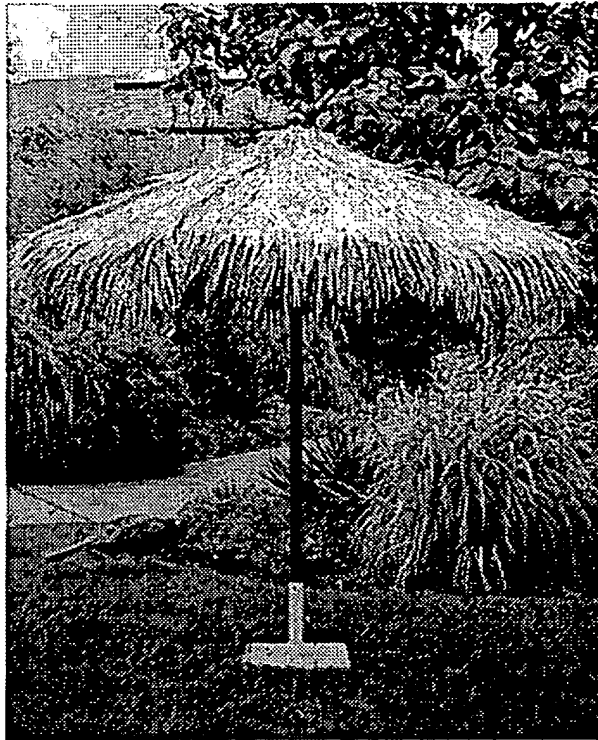

#T701 6' Thatch Umbrella
 #T702 8' Thatch Umbrella
 #T705 12.5' Thatch Umbrella

STANDARD FEATURES

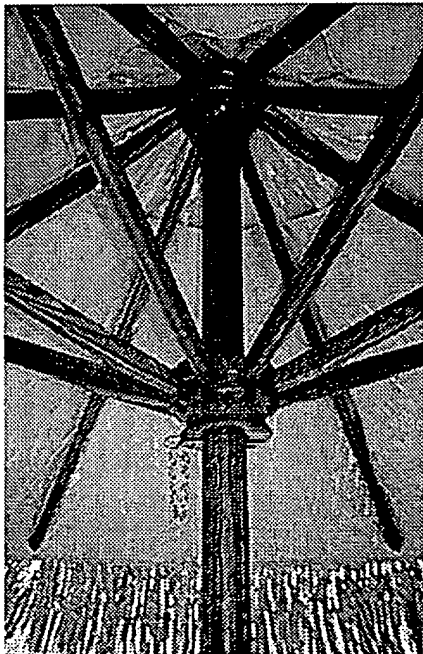

- 6 ft., 8 ft., or 12.5 ft. Octagon Canopy.
- Canopy is easily taken off or placed onto existing umbrella.
- Designed for water and air drainage allowing for long life of thatched canopy.
- Attractive both open or closed. Can be used with lights or other options.

OPTIONS

f1. Treatment for fire retardant uses.

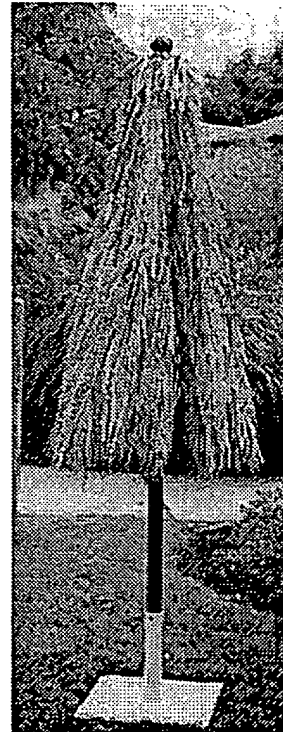

*#T702 8' Octagon Umbrella
 with Thatch cover canopy.
 Stand available separately (#600 series).*

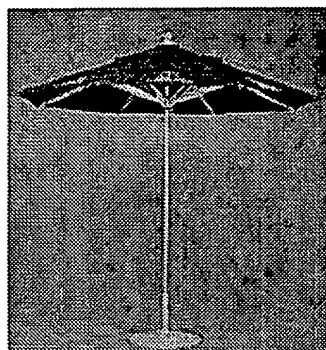

American Holtzkraft, Inc. Model #T701, #T702, and #T705 Thatch Umbrella frames are sand blasted and toned for authentic looking style. Note our custom weave pictured.

These unique umbrellas are manufactured exclusively at our Clermont, Florida Service Center.

Palm Thatch Made Easy!

Mexican Rain Cape panels and Umbrella Capes

Mexican Rain Cape, Typhoon Lagoon, FL

Want a tropical bar or restaurant setting? Rain Cape is the most affordable way to create the look of authentic palm thatching. Perfect for creating that tropical thatch theme.

Application

Materials

- Simple inexpensive approach to create that authentic palm thatch look.

- Can be used on any roof in place of regular roofing shingles, as well as on frame structures and umbrella frames.

- Not waterproof - purely shade covering.

- For applications requiring waterproofing, we recommend installing a regular subroof using regular 3/4" plywood substrate covered with felt or ice and water shield. Raise the Mexican Rain Cape panels above the solid substrate using a lattice of vertical and horizontal P/T furring strips - this prevents damming, and allows the panels to breath, increasing longevity.

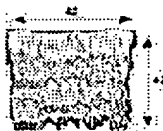

- For ideas on covering the underside (interior) of the plywood, take a look at our decorative covering materials.

Mexican Rain Cape Bar, FL

Specifications

- Panel dimensions: 42" x 42" x 1/8" thick.
- Panel weight: 4.6lbs
- Umbrella Cape diameter: 7ft , 9ft and 12ft Material.

[Click to see larger diagram](#)

Fire Retardancy

There are two options available.

- *Pre Treated Panels* -passes ASTM E-84 Class B - both interior and exterior fire retardant grades available. Simple and easy - ideal for avoiding overspray onto other high end finishes.
- *Fire retard on site* - can be retarded to ASTM E-84 Class B (interior or exterior) or Class A (interior only).

- These premium quality rain capes (120 knots per sqft) are hand-woven from palm leaf in Mexico.

- Replenishable, renewable resource.

Durability

- Interior - Indefinite.
- Exterior- from 1-2yrs in wet, humid climates, twice as long in hot, dry climates.

Pneumatically stapling Rain Cape sheets to furring strips.

Installation

- Simple DIY, no special skills reqd., faster than cedar shingles.
- Minimum suggested pitch is 30° (7in12), steeper pitch increases longevity.
- Installed in layered courses, at 42" on center, stapled to battens or a plywood subroof.
- For subsequent courses, allow the fringe of the next panel to overhang the panel in the preceding course.
- Panels are butted side to side.
- Each panel gives 12 sqft of roof surface coverage. Divide roof surface area by 12 to get quantity required.
- Umbrella capes simply fit over existing umbrella frames and/or canopies.
- Excess cape material can be tied into a finial at the umbrella apex to avoid excess material hanging low.

See [Fire Retardants](#) for more details.

Origins

Safari Thatch and Bamboo, Inc.

Material Supply Custom Manufacturing On-Site Construction Furniture

Founded in 1984 by Garth and Laraine Wight, Safari Thatch and Bamboo has, over the years, grown from humble beginnings to be the undisputed leader in the creation of jungle themed environments.

Safari's philosophy of recruiting and retaining world-class talent has ensured an exceptional staff driven to satisfy our customer needs. our success is embodied in our people.

Stimulated by challenge, Safari has embraced technology and change, and created a group of dynamic and flexible companies capable of satisfying just about any customer requirement. From this approach has evolved our simple motto:

YES WE CAN!

We are problem solvers, and we love to rise to your challenges. Over the past few years Safari has evolved into 4 separate and distinct operations - a material supply company, a custom manufacturing operation, a construction division, and a furniture division.

Cool Tropical Shade!

Natural Thatch Reed Umbrellas

7 Ft. Contract Umbrellas, Cyprus

Is the shade under your canvas umbrella unbearably hot? Looking for really cool shade under an umbrella? Tired of forever having to clean the mildew off your canvas umbrella? Tired of having to take down your market umbrella every time the wind picks up for fear of injuring your customers? Well Safari has the answer to all your problems. Take a closer look at our natural thatch reed umbrellas. Perfect for all outdoor and indoor applications. Hundreds of thousands sold world wide. Outstanding value. Exceptional customer satisfaction.

Features

- Cool shade, typically 10° cooler than canvas shade, warm air escapes through the reed.
- Withstands exceptionally high winds, never has to be taken down, even in the severest winters.

Installation

- Simple and easy to install - less than 2 hours - no special tools or skills required.
- Direct burial method is recommended where possible.

- 99% waterproof.
- Totally natural thatch reed, eco-friendly, replenishable resource.

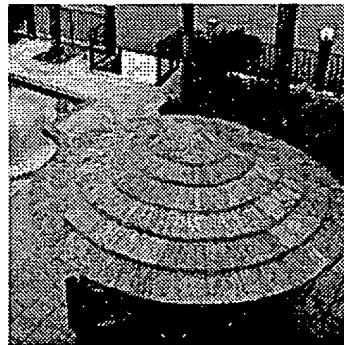

*9ft. Thatch Reed Umbrellas, Marriot
Frenchmans Reef,
St. Thomas*

- Very durable, lasts 5 - 12 years outdoors, depending on climate.
- No maintenance, no shedding, no mildew.
- Available in a range of sizes.
- Strong and durable galvanized steel frames designed to withstand harsh coastal conditions.
- Supplied with galvanized pole, sleeved with Duracane bamboo, or with P/T solid wood post.

*12 1/2 ft. Thatch Reed Umbrellas on
Peeled Cedar posts,
Fort Worth Zoo, TX*

- Dig an 18-24" deep hole using a post-hole digger, bury 18" of the steel pole and fill the hole with 2 bags of quick-set concrete.
- Bolt frame quadrants together.
- Clip on thatch panels.

*11 ft. Thatch Reed Umbrella, Intracoastal
residence, FL*

16 ft. Thatch Reed Gazebo on 6 poles plus 7 1/2 ft. umbrella

Note: Special Contract Umbrellas (TU-C) are one piece frames. Minimum order of 10 units.

Matching Thatch & Bamboo Concession Stands & Thatch Reed Panels

- Matching thatch and bamboo concession stands available in 2 standard sizes, or custom made to your specifications

- These concession stands do not need to be taken down even in exceptionally strong winds, and are ideal for outdoor applications such as beaches, poolside bars, patios and waterparks.

- Matching individual thatch panels available for creating a thatch look over existing buildings and shade structures.
